 Hospital Program

mamaRoo®4

It moves like you do™

The 4moms mamaRoo infant seat bounces up and down and sways from side to side, just like parents do when comforting their newborns. Five unique, natural motions:

car ride

kangaroo

tree swing

rock-a-bye

wave

The mamaRoo and Hospitals

Neonatal Intensive Care Units (NICUs) find the mamaRoo infant seat transformational in the care of their smallest, fussiest patients. The seat is currently used in over 350 hospitals nationwide (US).

FEATURES

MOTION

The natural motions help promote longer periods of comfort and calm to facilitate testing and provide parents and caregivers some respite.

RECLINE

The mamaRoo seat adjusts to a range of recline positions to accommodate various needs. The upright position has proven to be helpful for babies suffering from reflux.

SEAT

The open design of the mamaRoo seat allows newborns to sit comfortably while connected to monitors and other hospital equipment. The seat can be stationary, allowing for safe placement and removal of an infant. Seats and accessories are fully removable and machine washable.

DESIGN

The mamaRoo is 1/3 the size of traditional swings making it ideal for smaller spaces with limited storage. It is lightweight and can easily be moved. It plugs in, so batteries are not required.

NON-PHARMACOLOGICAL TREATMENT

Clinicians have found the motions of the mamaRoo to be especially helpful caring for babies experiencing Neonatal Abstinence Syndrome (NAS).

"The mamaRoo provides a bouncing and swaying motion, which is comforting and provides longer periods of calm. This helps promote rest for our fragile and recovering infants, and helps soothe our babies so they can devote their energy to healing and growing."

*-Dr. Padbury, Pediatrician-in-Chief
Women & Infants Hospital of Rhode Island*

WHAT CAREGIVERS HAVE TO SAY...

"The mamaRoo is invaluable to our tiniest of patients. It snuggles our preemies as if they were being held by their own mom or dad."

-Debbie D., RN

"The one feature of the mamaRoo that instantly sold me is the fact it can be adjusted to recline and/or sit upright. This allows babies with varying conditions to use the seat."

-Sarah M., CCLS

"The mamaRoo has been extremely helpful with our fragile NAS population by providing the vestibular input these babies need for soothing, allowing for longer periods of sleep between cares. The mamaRoo also is used for our near-term or term infants who need developmentally appropriate stimuli."

-Becky R., PT, DPT

"I placed a fussy and inconsolable infant into the mamaRoo and they were instantly calmed just by starting the swing! The mamaRoo is a wonderful option when an infant just wants to be held while we need to be providing care to other patients."

-Whitney T., RN
